

Onyfix®

FAQ

WHAT IS A TYPICAL PATIENT FOLLOW UP TIME-FRAME?

en

PLEASE NOTE THIS IS PATIENT DEPENDENT.

Clinical Educator, Bree Wright, states the following:

”
I follow up with my patients at monthly intervals for the first 3-4 months. Typically after I have applied the second strip and all is going well I then move the appointments back to every two months as needed. At these visits I am making sure to reinforce any distal wedge resections to prevent pressure distally and am also making sure to clean out the distal sulci with my blacks file and asses that the Onyfix® strip is still firmly attached. I do charge an office visit for each of these follow ups and for each additional strips that I apply, when they need to be applied.
